U1: As Daniel Savant (a backend systems administrator for CCS), I want a well-designed database that allows me to easily retrieve data when needed.

U2: As Daniel Savant (a backend systems administrator for CCS), I would like a system allowing for the storage and retrieval of generic presets, allowing me to easily use this system in any future expansions I may be mandated to develop.

U3: As Daniel Savant (a backend systems administrator for CCS), I would like a specific template system for the different iCare templates, allowing me to directly add new template configuration files to the system.

U4: As Daniel Savant (a backend systems administrator for CCS), I would like a system that parses the iCare templates into an in-memory data object, allowing for easy access of iCare data in the system.

U5: As Dave Patel (an intern at TEQ), I want to be able to take populated iCare files and transfer them into the company's database for review and further use by other staff.

U6: As Daniel Savant (a backend systems administrator for CCS), I would like a base system for the reports, allowing me to easily develop new report types.

U7: As Richard Wong (a business analyst at CCS), I would like for a varied selection of report types to be available to me so that I can easily generate different reports formats.

U8: As Careena Smith (a front desk staff/receptionist at Family Services of Peel), I want a graphical interface where I can upload iCare files, allowing me to easily input client information into the system.

U9: As Amelia Ereck (a staff member at the TEQ), I want a consolidated administrative graphical user interface that lets me upload iCare files and generate reports. I also want it to give me the ability to access a separate editor for managing iCare and report templates.

U10: As Daniel Savant (a backend systems administrator for CCS), I would like all source code in the system to be well formatted, documented and have appropriate unit/integration tests.
